Press Release

Solar Rating & Certification Corporation Announces ANSI Accreditation as a Certifying Body

Cocoa, FL, January 31, 2013 - The SRCC's accreditation is based on earning ISO 17065 accreditation for its solar thermal collector certification program, known as SRCC OG-100[®], and for its solar thermal water heating certification program for residential and commercial applications, known as SRCC OG-300[®] certified solar systems program. ANSI has also awarded the SRCC accreditation to the Energy Star[®] program.

The SRCC coordinates, facilitates and promotes the development of voluntary consensus standards for the solar thermal industry that are relied upon by industry, government agencies and consumers across the United States. The SRCC engages in collaboration with other organizations working on harmonization and partnerships around the world. The SRCC (as an ANSI accredited organization) and the experts that participate within the SRCC framework, work cooperatively to enhance the U.S. quality of life, and improve the competitiveness of businesses operating in the global marketplace.

The SRCC is the nation's premier rating credentialing, quality assurance and standards-setting organization for solar thermal collector performance and solar thermal water heating systems. The SRCC develops technical standards using an open, transparent, consensus-based process built on technical expertise in solar thermal technology.
